- Delivery, installation and commissioning of entire system
- Guarantee phase including maintenance period for 2 years with an option for 5 years

Passenger Information Displays Hoogkerk Park & Ride

The new Park & Ride in Hoogkerk is officially in operation since January 2011. Buses depart from the Park & Ride to the city of Groningen. The parking lot has a waiting room with information displays. These displays provide clear information about arrival and departure times of buses and mention the platforms from where the buses will leave.

Strukton Systems was the system integrator responsible for the design and realisation of the displays, including the project management, basis and detail engineering, purchasing, installation, testing and commissioning. A guarantee phase including maintenance period follows after completion of the project.

In addition to the installation and realisation of the required control and application software, Strukton Systems took care of the design and creation of aesthetically pleasing suspension structures for the displays. Strukton Systems did so in cooperation with the supplier. The displays form an architectural whole with the environment. A service and maintenance contract was closed for the project simultaneously.
